DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-6 in Paper No. 6 is acknowledged. Claims 7-24 are withdrawn from consideration by the examiner as being drawn to inventions non-elected without traverse.
2. The restriction requirement is made FINAL.

Information Disclosure Statement

3. The *Journal of Medicinal Chemistry* reference is illegible. Accordingly, it has been crossed off on the IDS.

Claim Objections

4. Claim 6 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. This claim should probably depend from either claim 1 or claim 2. It has been examined on that basis.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1751

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1, 2 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Schoelkopf et al., US 4,958,026. The reference discloses the preparation of compounds as depicted in Fig. II in col. 6, in which one of R10 and R11 is benzyloxy and the other is amino (col. 6, lines 49+), followed by hydrogenation or ether cleavage to convert the benzyloxy group to hydroxyl. R1 and R2 may be hydrogen or alkyl of 1-5 carbons (col. 6, line 2).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of

Art Unit: 1751

the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

10. Claims 1, 2 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schoelkopf et al., US 4,958,026. The reference discloses the preparation of compounds as depicted in Fig. II in col. 6, in which one of R10 and R11 is benzyloxy and the other is amino (col. 6, lines 49+), followed by hydrogenation or ether cleavage to convert the benzyloxy group to hydroxyl. R1 and R2 may be hydrogen or alkyl of 1-5 carbons (col. 6, line 2). Note Example 1, in which the dihydrochloride salt of the N,N-dipropyl compound is prepared. Preparation of amine compounds as salts is notoriously common in the chemical art for purposes of preparation and storage. Accordingly, it would have been obvious at the time the invention was made to make compounds as disclosed in Fig. II, followed by deprotection to afford the hydrochloride salts of the resulting hydroxyaniline compounds, because the reference discloses their utility as synthetic intermediates.

Allowable Subject Matter

11. Claims 3-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

12. The following is a statement of reasons for the indication of allowable subject matter: The closest prior art of record is the reference relied upon above. It does not disclose or motivate the preparation of compounds in which the R groups pendent from the alkylamine are heterocyclic or together comprise a heterocycle.
